

## Warning and cautions

### Unpacking

**IMPORTANT!** Please remember that the packaging elements (paper, cellophane, metal staples, adhesive tape, etc.) can cut and/or hurt when they are not carefully handled. It is recommended to unpack the product with the appropriate means.

Then, once the packing is opened, the parts that make up the product will need an overall control, in order to check that all components are present and in perfect condition. See last section of this document.
